

# Venn Data and Integrations

Venn by Two Sigma helps institutional investors of all sizes embrace a modern, quantitative, and intuitive approach to multi-asset portfolio risk management and investment decision making. Venn combines Two Sigma’s expertise in technology and investment analysis with a modern platform for data-driven portfolio decisions.

## Power Your Workflows with Robust Data

Access 100,000+ public funds, ETFs, equities, and indices, plus additional datasets including digital and private assets, and upload your own data. As part of our onboarding process, client portfolio data can be integrated with the Venn platform and accessed alongside the Venn Data Library.

- Venn was designed to help analyze multi-asset portfolios and can support API integrations with custodians, administrators, performance reporting systems, and other 3rd party software providers.

  - Venn offers flexible data ingestion and delivery via API integrations.
  - Clients are also able to upload return streams and can export any uploaded returns.
  - Venn supports multiple file formats, including Excel, PDF, and CSV.

- By integrating proprietary investment return data, clients can efficiently analyze all portfolios in one place. For clients subscribed to our Premier Tier, dedicated Client Solutions Specialists will work closely with each new client to facilitate seamless initial and ongoing integration of portfolio data including:

  - Client, Account, and Investment IDs
  - NAVs
  - Returns
  - Parent/Child Relationships and Portfolio Tree Structure
